PROFESSIONAL PROFILE

Data Analytics postgraduate with an MSc from the University of Brighton and a Bachelor's degree in Information Technology. Skilled in SQL, Python, R, SAS and Power BI, with practical experience in data cleaning, exploratory data analysis, statistical modelling, machine learning and dashboard development. Experienced in analysing large datasets, identifying trends and translating analytical findings into actionable business insights through academic projects.

TECHNICAL SKILLS

Data Analytics: SQL, Python, R, SAS, data cleaning, data visualisation, exploratory data analysis, regression analysis, statistical modelling, hypothesis testing, A/B testing and cohort analysis.

Ecommerce Analytics: Funnel analysis, customer segmentation, churn analysis, conversion rate analysis, Customer Lifetime Value (CLV) and KPI tracking.

Business Intelligence: Power BI, Tableau (basic), dashboard reporting and data storytelling.

Programming: Python, R, Java, Advanced Java and Object-Oriented Programming (OOP).

Databases: SQL, MySQL and SQL Server.

EDUCATION

MSc in Data Analytics 2026
University of Brighton, United Kingdom

Bachelor of Engineering 2023
Information Technology, Mumbai University, India

CERTIFICATION

SAP Certified Development Specialist
ABAP for SAP HANA 2.0 Certificate No. 0025823234

ACADEMIC PROJECTS

Hotel Booking Analysis

Analysed 21,996 hotel booking records using Python, SQL Server and Tableau. Calculated $6.82M in total revenue and an average daily rate (ADR) of $87.18. Identified Resort Hotels as contributing 51.7% of total revenue and Online Travel Agencies as the largest revenue-generating channel. Developed an interactive Tableau dashboard to visualise revenue performance, booking channels and country-wise business insights.

Airline Customer Loyalty Analytics

Analysed 392,936 flight transactions and 16,737 customer records using Python, Pandas, NumPy and Plotly. Integrated three datasets into a consolidated customer-level dataset containing 23 variables. Identified Aurora as the highest-value loyalty tier, with an average Customer Lifetime Value (CLV) of 10,673, compared with 8,046 for Nova and 6,742 for Star. Developed data-driven recommendations for customer retention, loyalty tier upgrades and churn prevention.

King County House Price Prediction

Analysed 21,614 house sales to identify factors affecting property prices. Found that house size, building quality and location had the greatest influence on prices. Built a Stacking Ensemble Regressor that explained 89.48% of house price variations (R^2).

Google Play Store App Rating Analysis

Analysed 9,367 apps using R to identify factors affecting user ratings. Found that Education and Books apps had higher median ratings, while paid apps scored slightly higher than free apps. Reviews and installs were important predictors, but overall relationships were weak. Built Linear Regression and Random Forest models, achieving an RMSE of 0.486, MAE of 0.318 and R^2 of 17.8%.

Placement and Salary Prediction System 2023

Collected and preprocessed real historical student placement data from university (2022 graduates), using 12 student attributes covering academic performance, technical skills and communication abilities to analyse their relationship with placement outcomes. Developed Android and web applications for placement and salary prediction. Built an NLP-based job recommendation feature to match CV skills with job descriptions using Python, Flask and SQL.
